DATA SHEET

Fire-resistant cable grommet

www.kopos.com

type number	thickness (mm)	height (mm)	outer Ø (mm)	
PKP_PO	1,5	40	26	

product description: The grommet is made of a flexible graphite-based material that expands in volume when exposed to high temperatures, forming a thermally insulating barrier that prevents the spread of fire, smoke and heat through openings into another fire compartments.

Fire-resistant cable grommets are designed for firestopping cables and flexible or rigid plastic conduits with diameters up to 21 mm in walls and ceilings. They prevent the spread of fire and smoke to another fire compartments. They have been tested in standardized wall and ceiling constructions.

material: flexible graphite material

classification: ČSN EN 1366-3
ČSN EN 12501-1/2
Fire classification depends on the specific promat systems 701, 704 and 721.

sales amount: 1 pc

⚠ WARNING

Thermal hazard

Exposure to high temperatures during installation or removal may result in burns.

Safe Use

Under normal and foreseeable conditions of use, there are no risks to consumers, provided that proper installation and usage are carried out in accordance with the installation manual.
